"Adyen's omnichannel payments processing product and global acquiring footprint mean that merchants can avoid the operational headaches that a multi-back-end architecture creates, it does so without losing its tech focus, leveraging its data and machine learning to effectively boost authorization rates.

FORRESTER®

"Adyen has exploded along with its customers, startup Internet giants including Facebook, Uber and Spotify."

THE WALL STREET JOURNAL.

"Adyen has carved out a powerful place by laying down smooth payment rails all over the world for the biggest names in tech."

This is Adyen

All technology built in-house

Full control

Control over software and value chain providing more control over the payment and fast rollout of innovations and updates

Worldwide platform

250+ payment methods
1700+ global employees
23 Global offices

Simple integration

Unrivalled simple integration and self boarding terminals

The Adyen Way of Engineering

We prioritise **current merchant experience** over future features

To think like the **merchant** we **go meet them**

We design for **20x**

Expose your work **early**

We are all **designers, architects, coders, testers, security officers** and **operations engineers**

We all make mistakes, but we **seek help** as soon as we find out

You own when, where and how **your code goes live**

Your code should be understandable **at 4am** under stress

We embrace **new technology** when it has clear benefits

Our tech stack is **open source** or **built in-house**

High Level Architecture (Pre-Adyen)

High Level Architecture (Pre-Adyen)

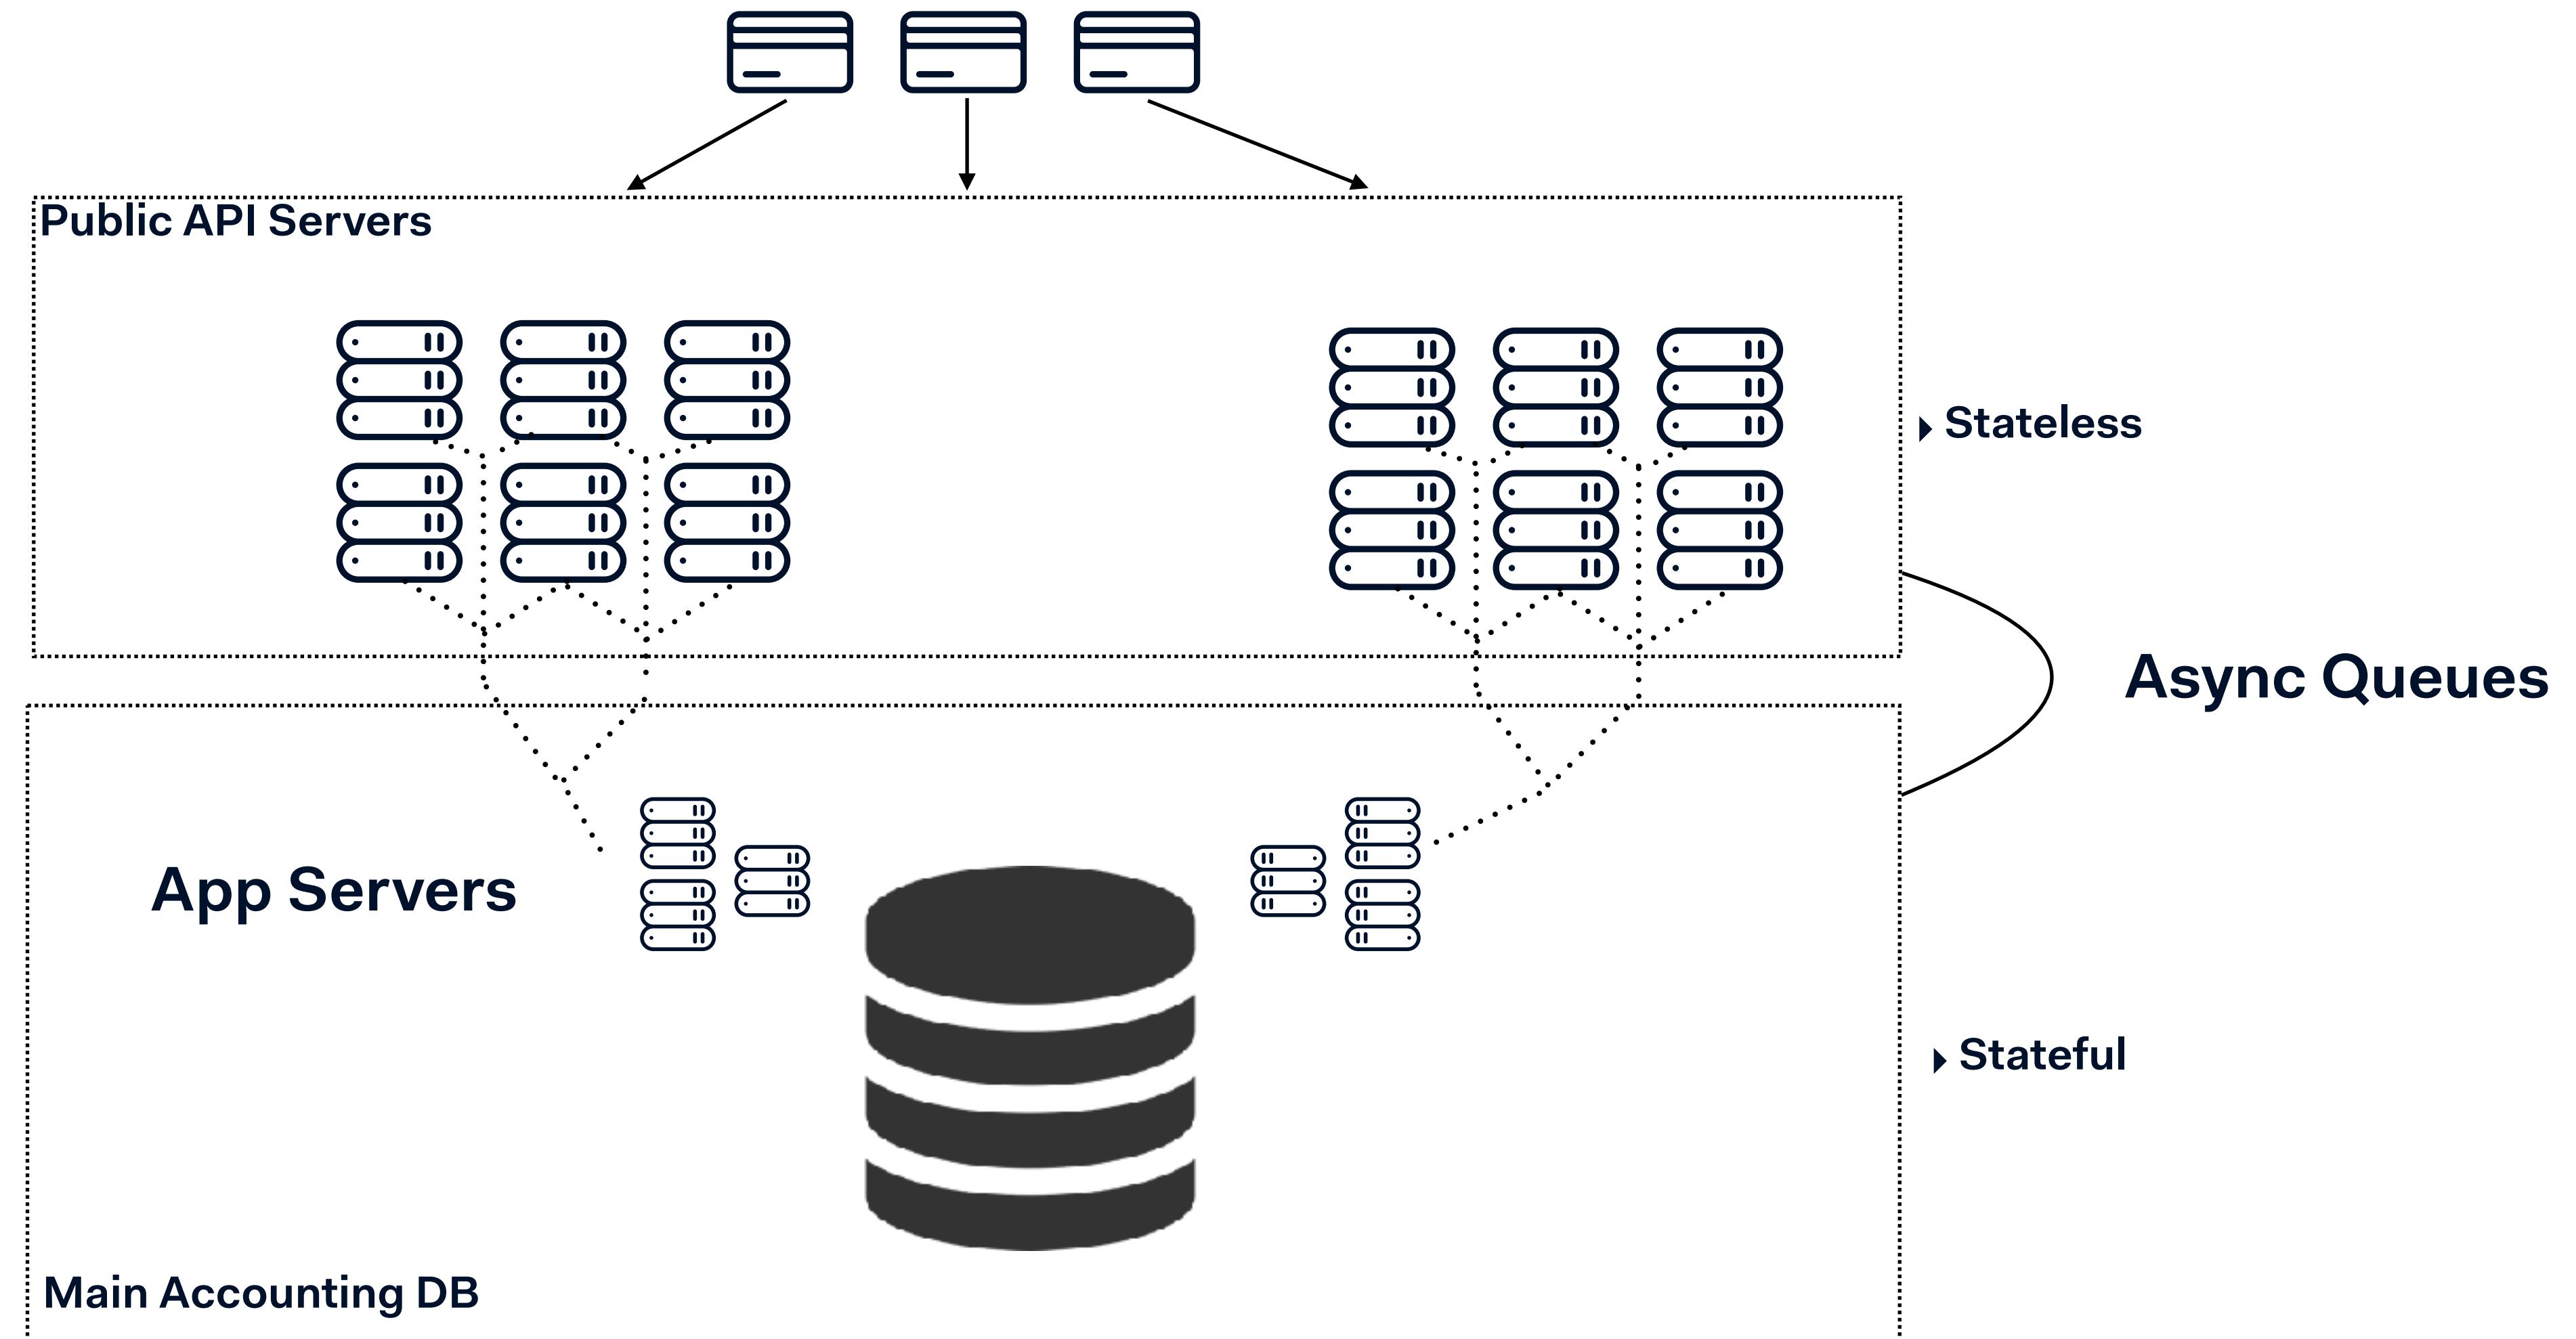

High Level Architecture (Pre-Adyen)

A photograph of a person rappelling down a steep, reddish-brown rock face. The climber is wearing a blue helmet, tan pants, and a harness. They are holding onto a rope attached to a gear loop on their harness. The background shows the textured surface of the rock wall.

Consequence of being Stateless

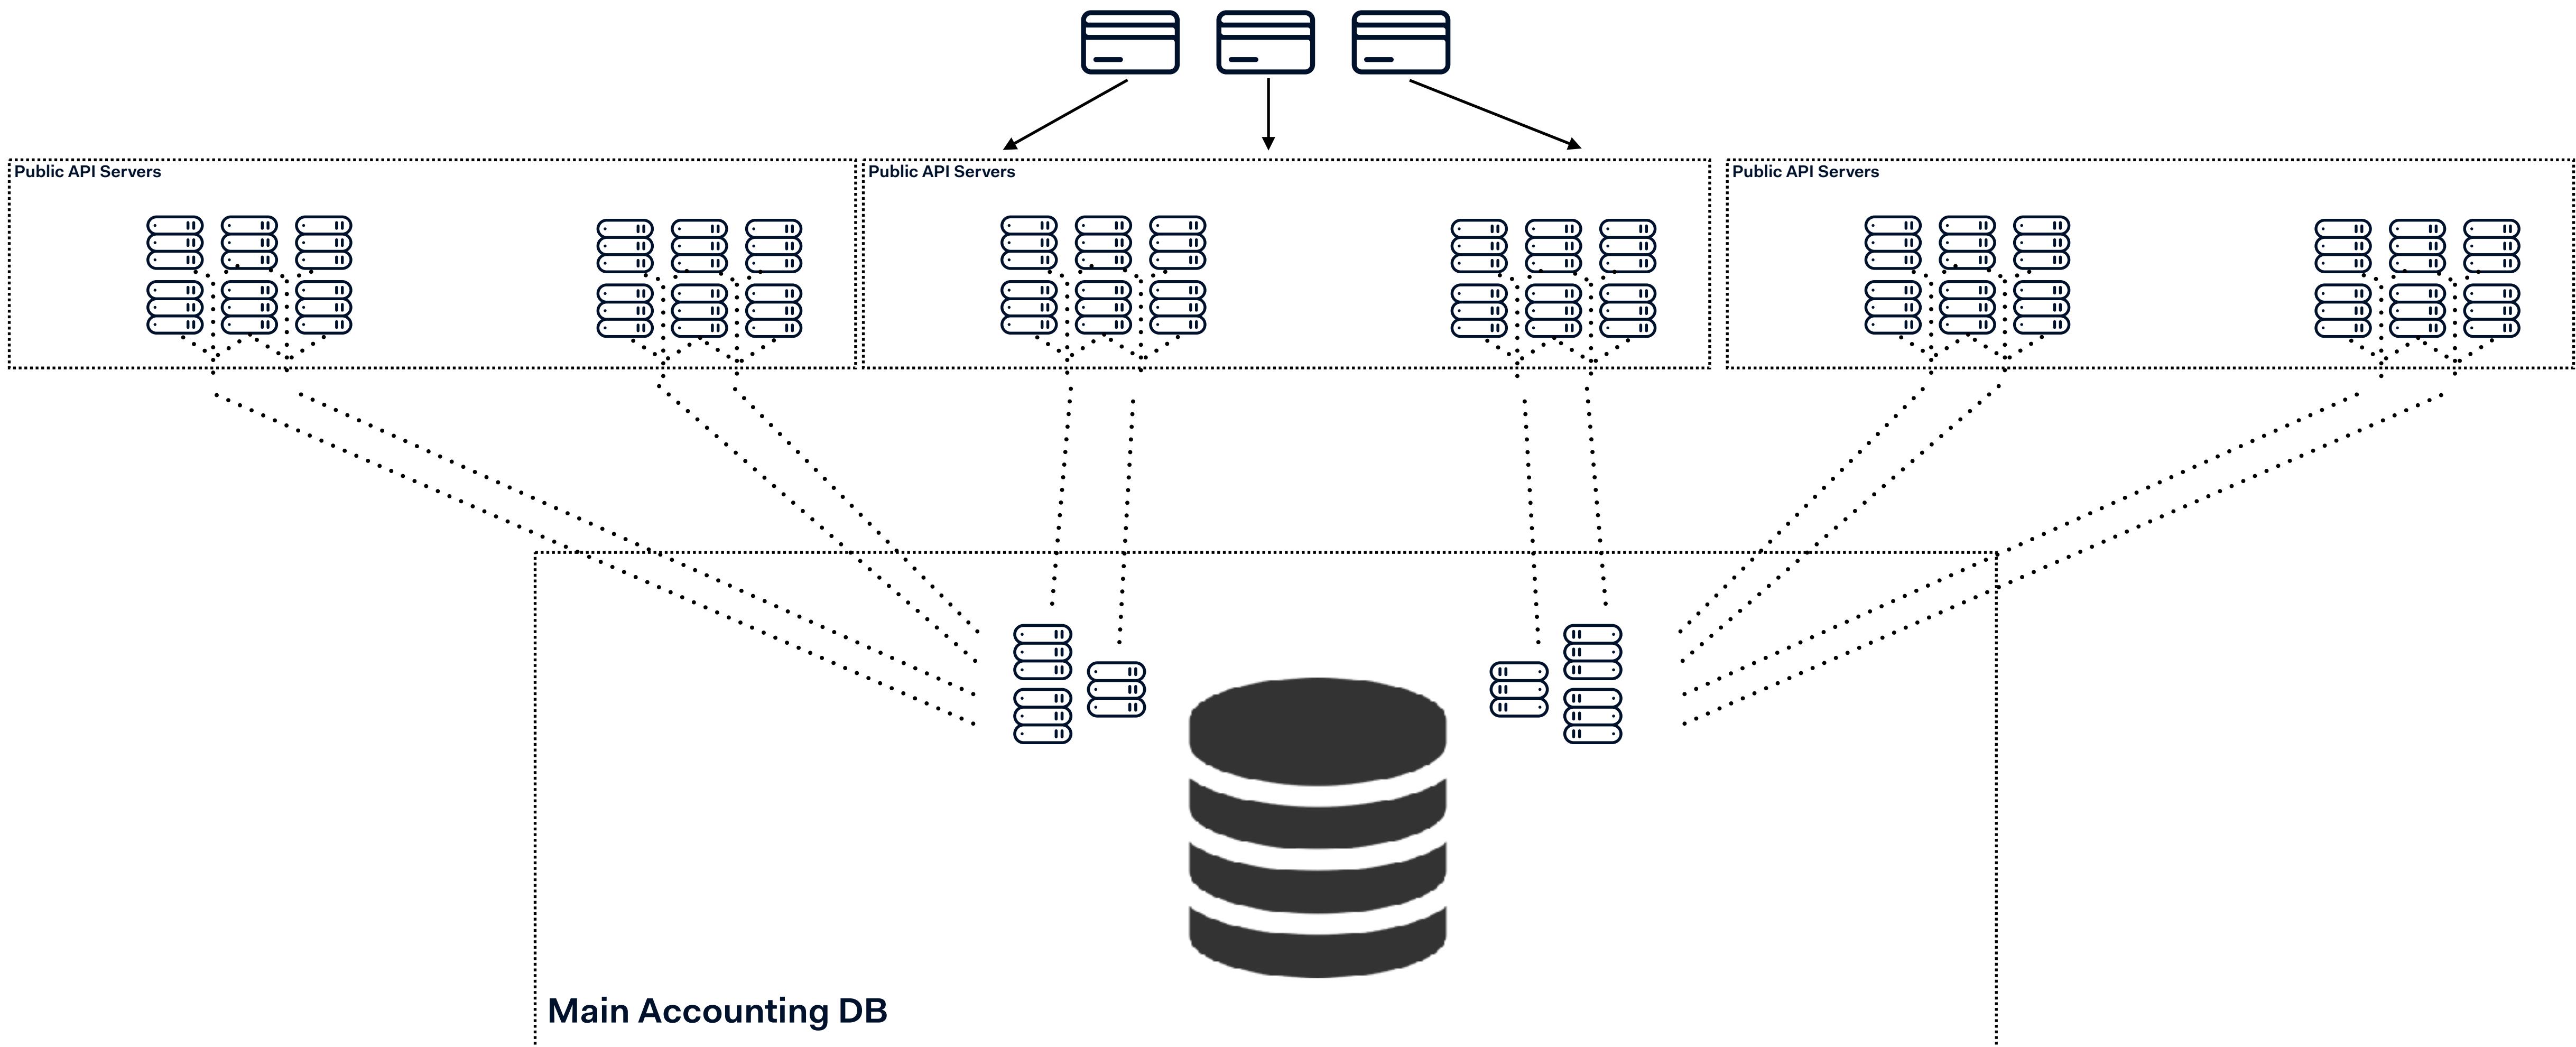

High Level Architecture

Consequence of being Stateless

High Level Architecture

The Challenge

Growing Exponentially

Going to the \$1 Trillion in processed volume

Scalability Challenge

API (micro)services designed to be highly redundant and stateless.

Scale linearly with more hardware.

However main payment accounting system was running > 70TB on a single PostgreSQL instance at up to 25k tps.

At 2-4x, optimisation and/or bigger hardware solve the problem.

At 20x this is no longer sufficient and requires re-architecting.

Marbles

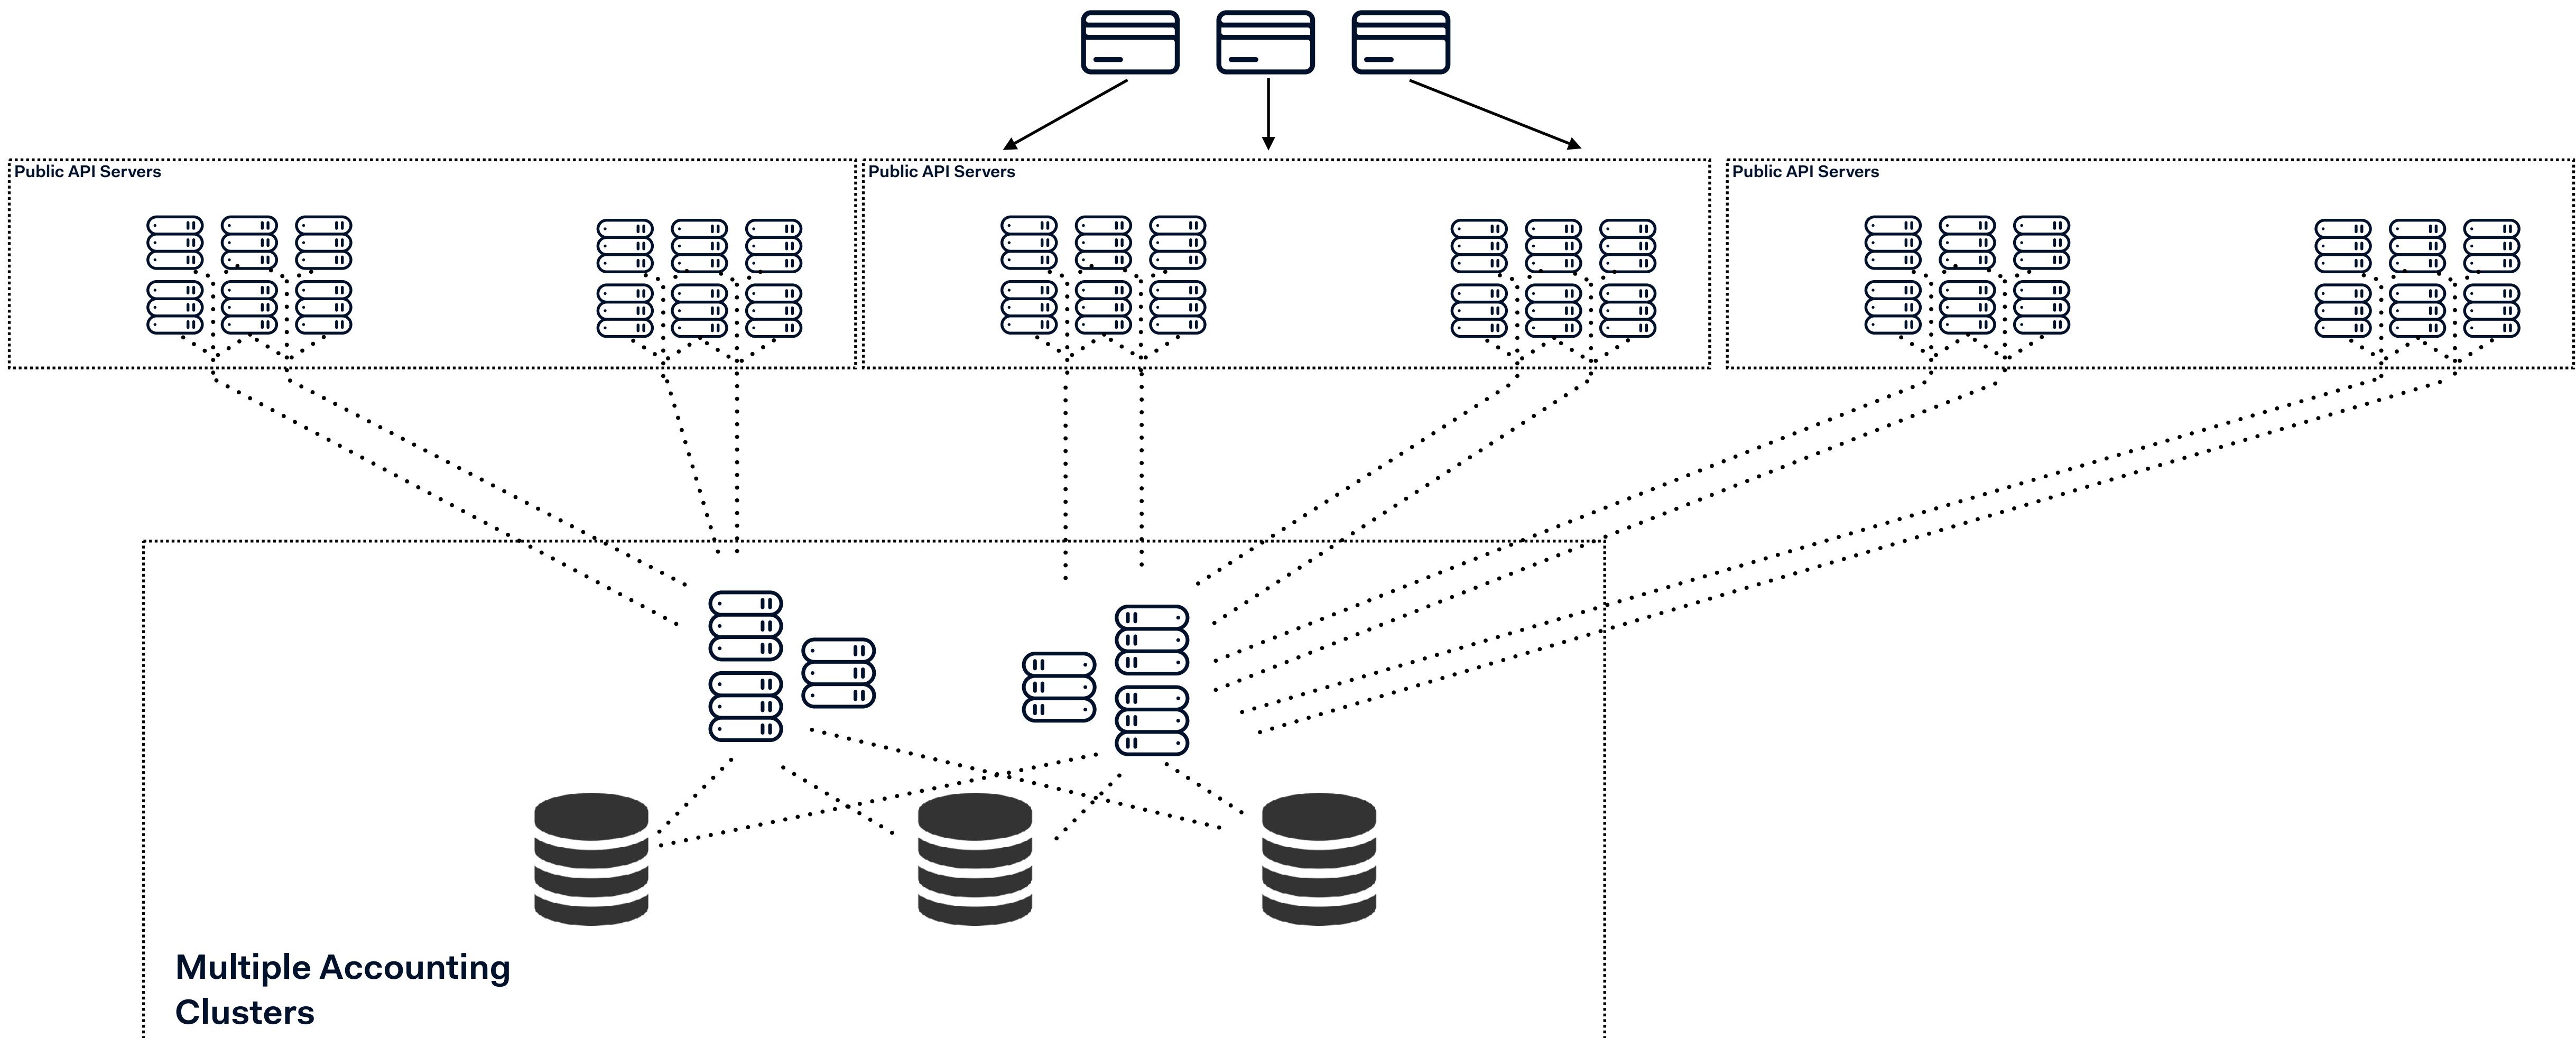

adyen

Business. Not boundaries.

Generating Reports/ Batch Files

High Level Architecture The Solution

A photograph showing a large number of clear glass jars filled with marbles. The jars are stacked in several rows, creating a dense, repetitive pattern. The marbles inside the jars are mostly green, with some featuring red, yellow, and blue stripes. The lighting creates highlights on the glass and the reflective surfaces of the marbles.

More Marbles

    "response" : "[refund-received]"  
}
```

High Level Architecture The Solution

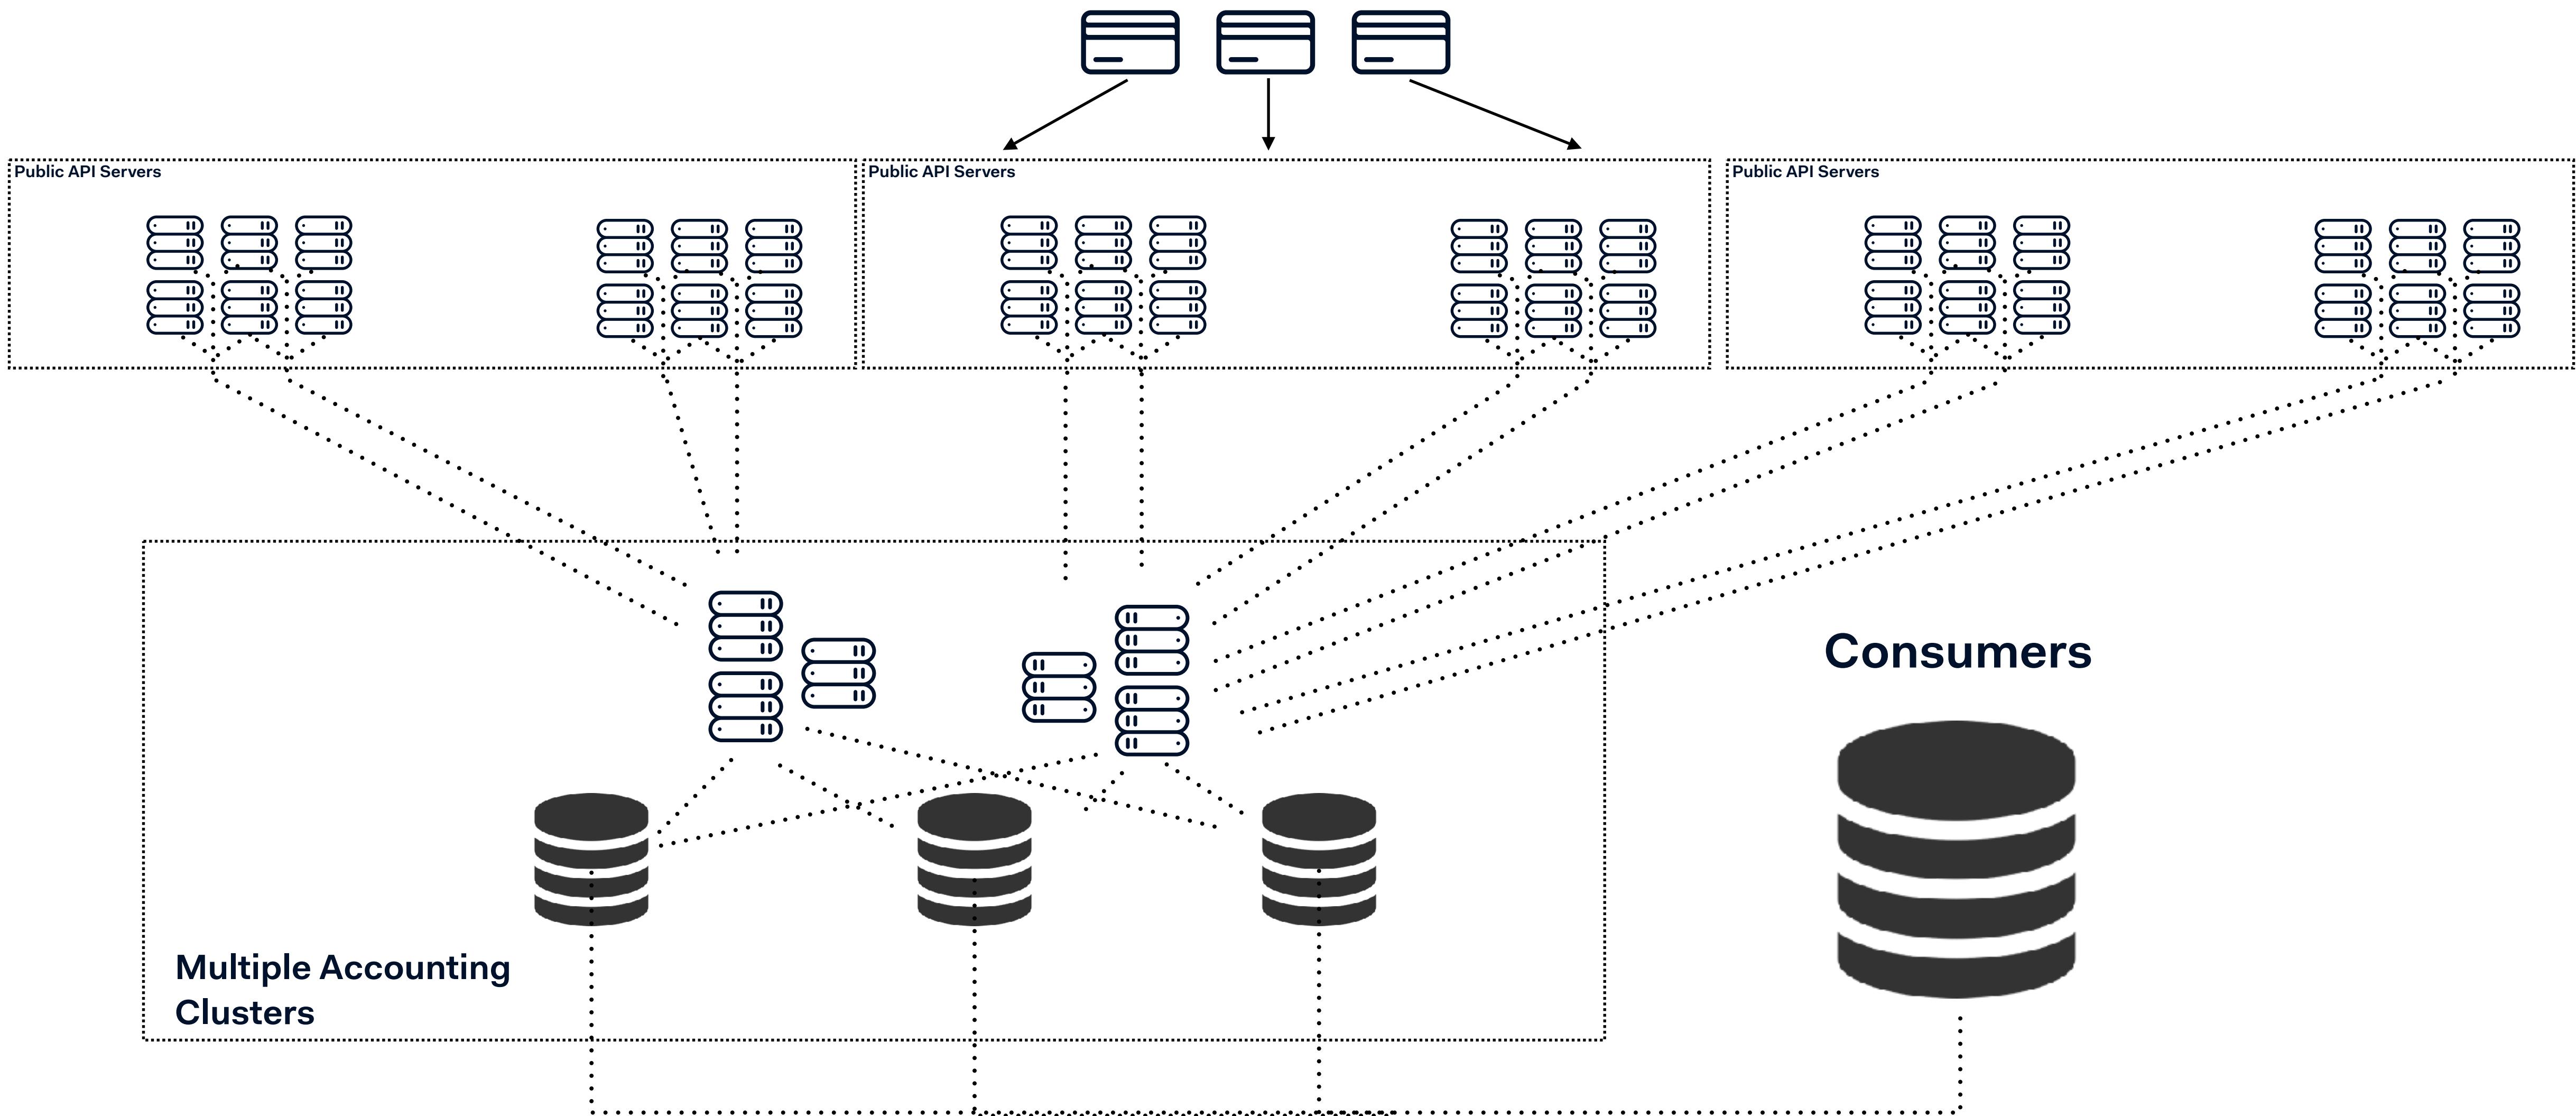

Putting it into Production

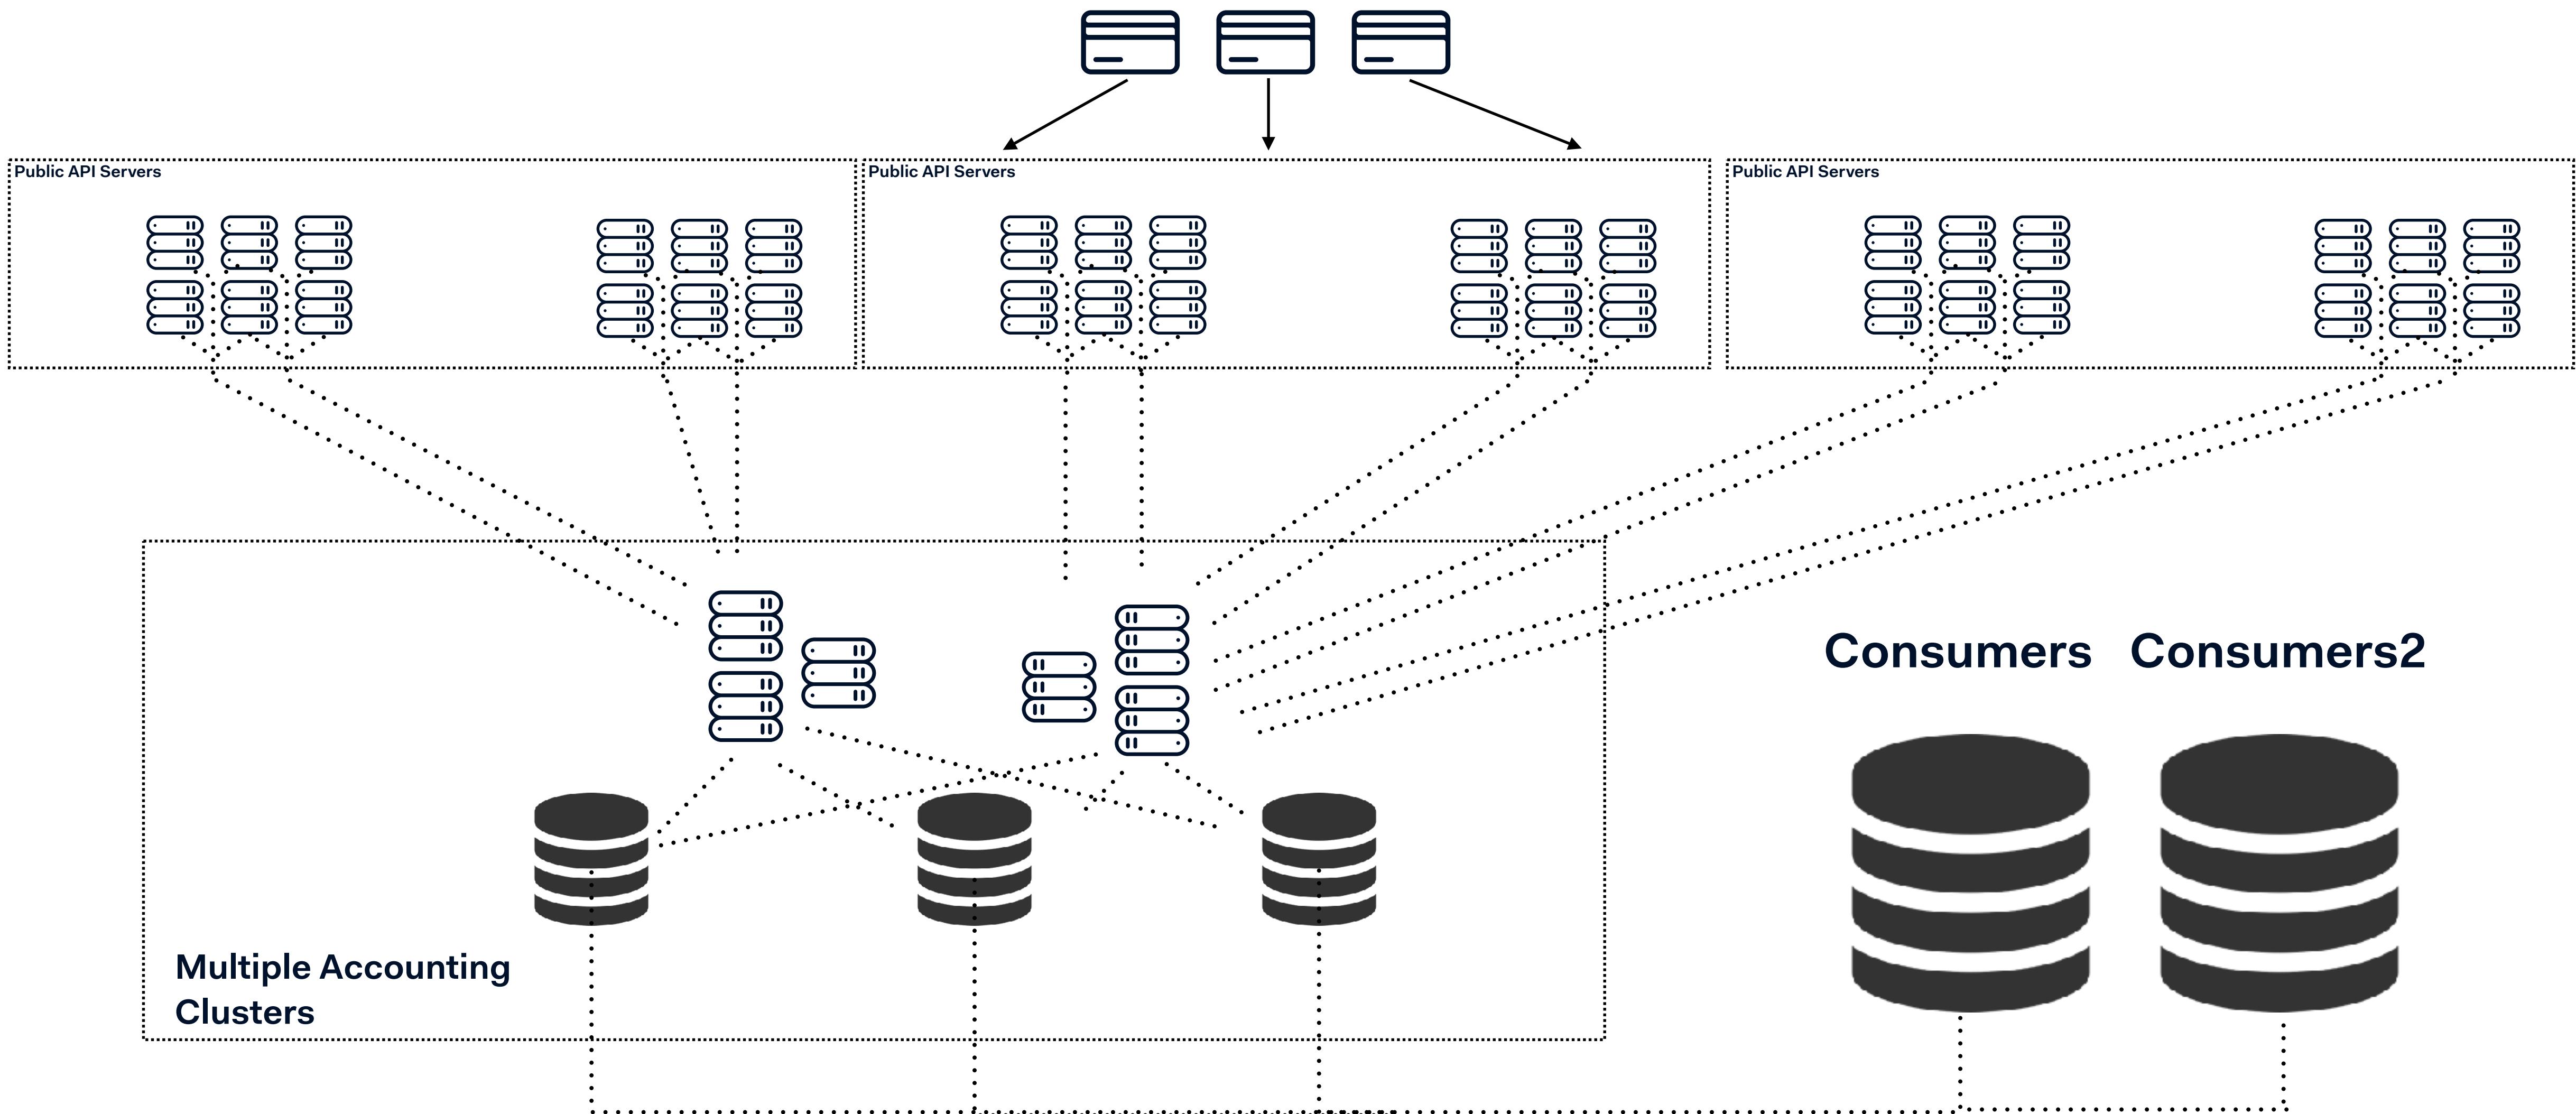

High Level Architecture

The new challenge

High Level Architecture

The new challenge

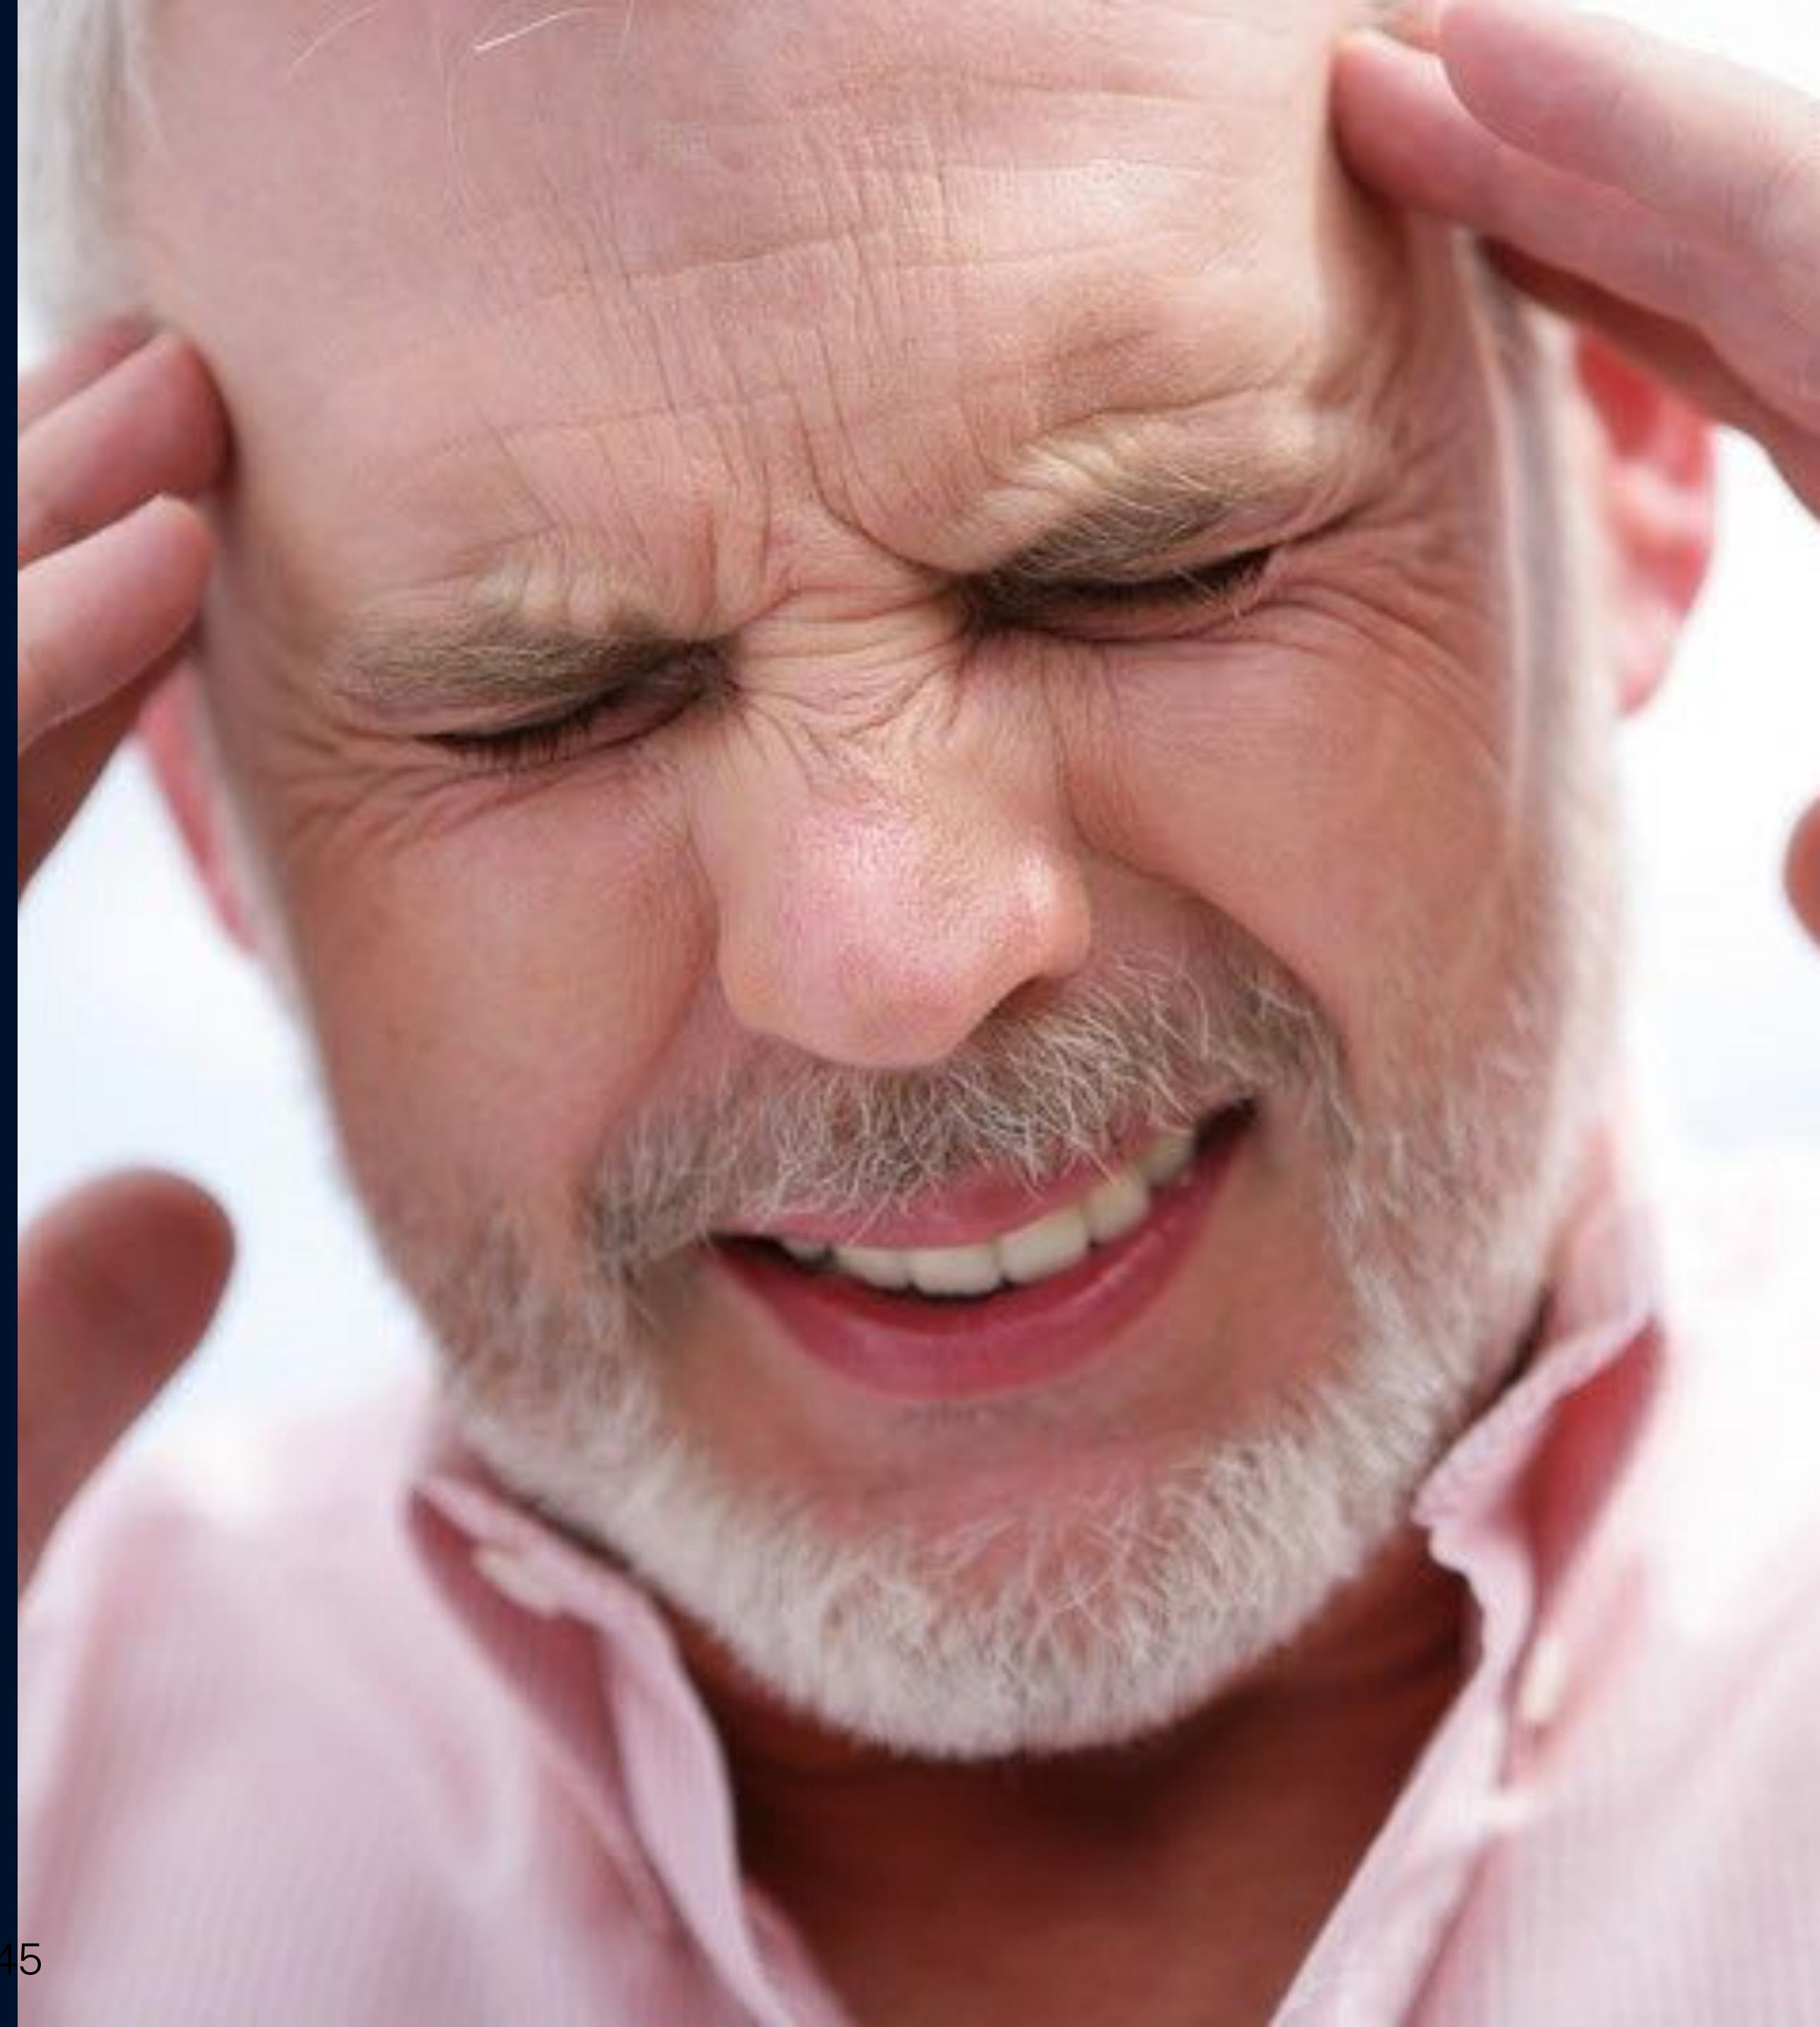

There are quite some difficulties with this approach

Data is used mostly to generate reports for merchants.

It would be quite intense to query that from multiple databases so for this use case this does not make sense

At the same time we would be increasing a marble jar to be a very big marble jar

Partitioning

Splitting up data in smaller tables.

Postgresql provides inheritance (newer versions also provide native partitioning).

Select and insert can be optimised by selecting or inserting only in a partition

Adding check constraints on the data can allow Postgresql to take shortcuts

Data Retention Strategy

Don't keep data indefinitely!

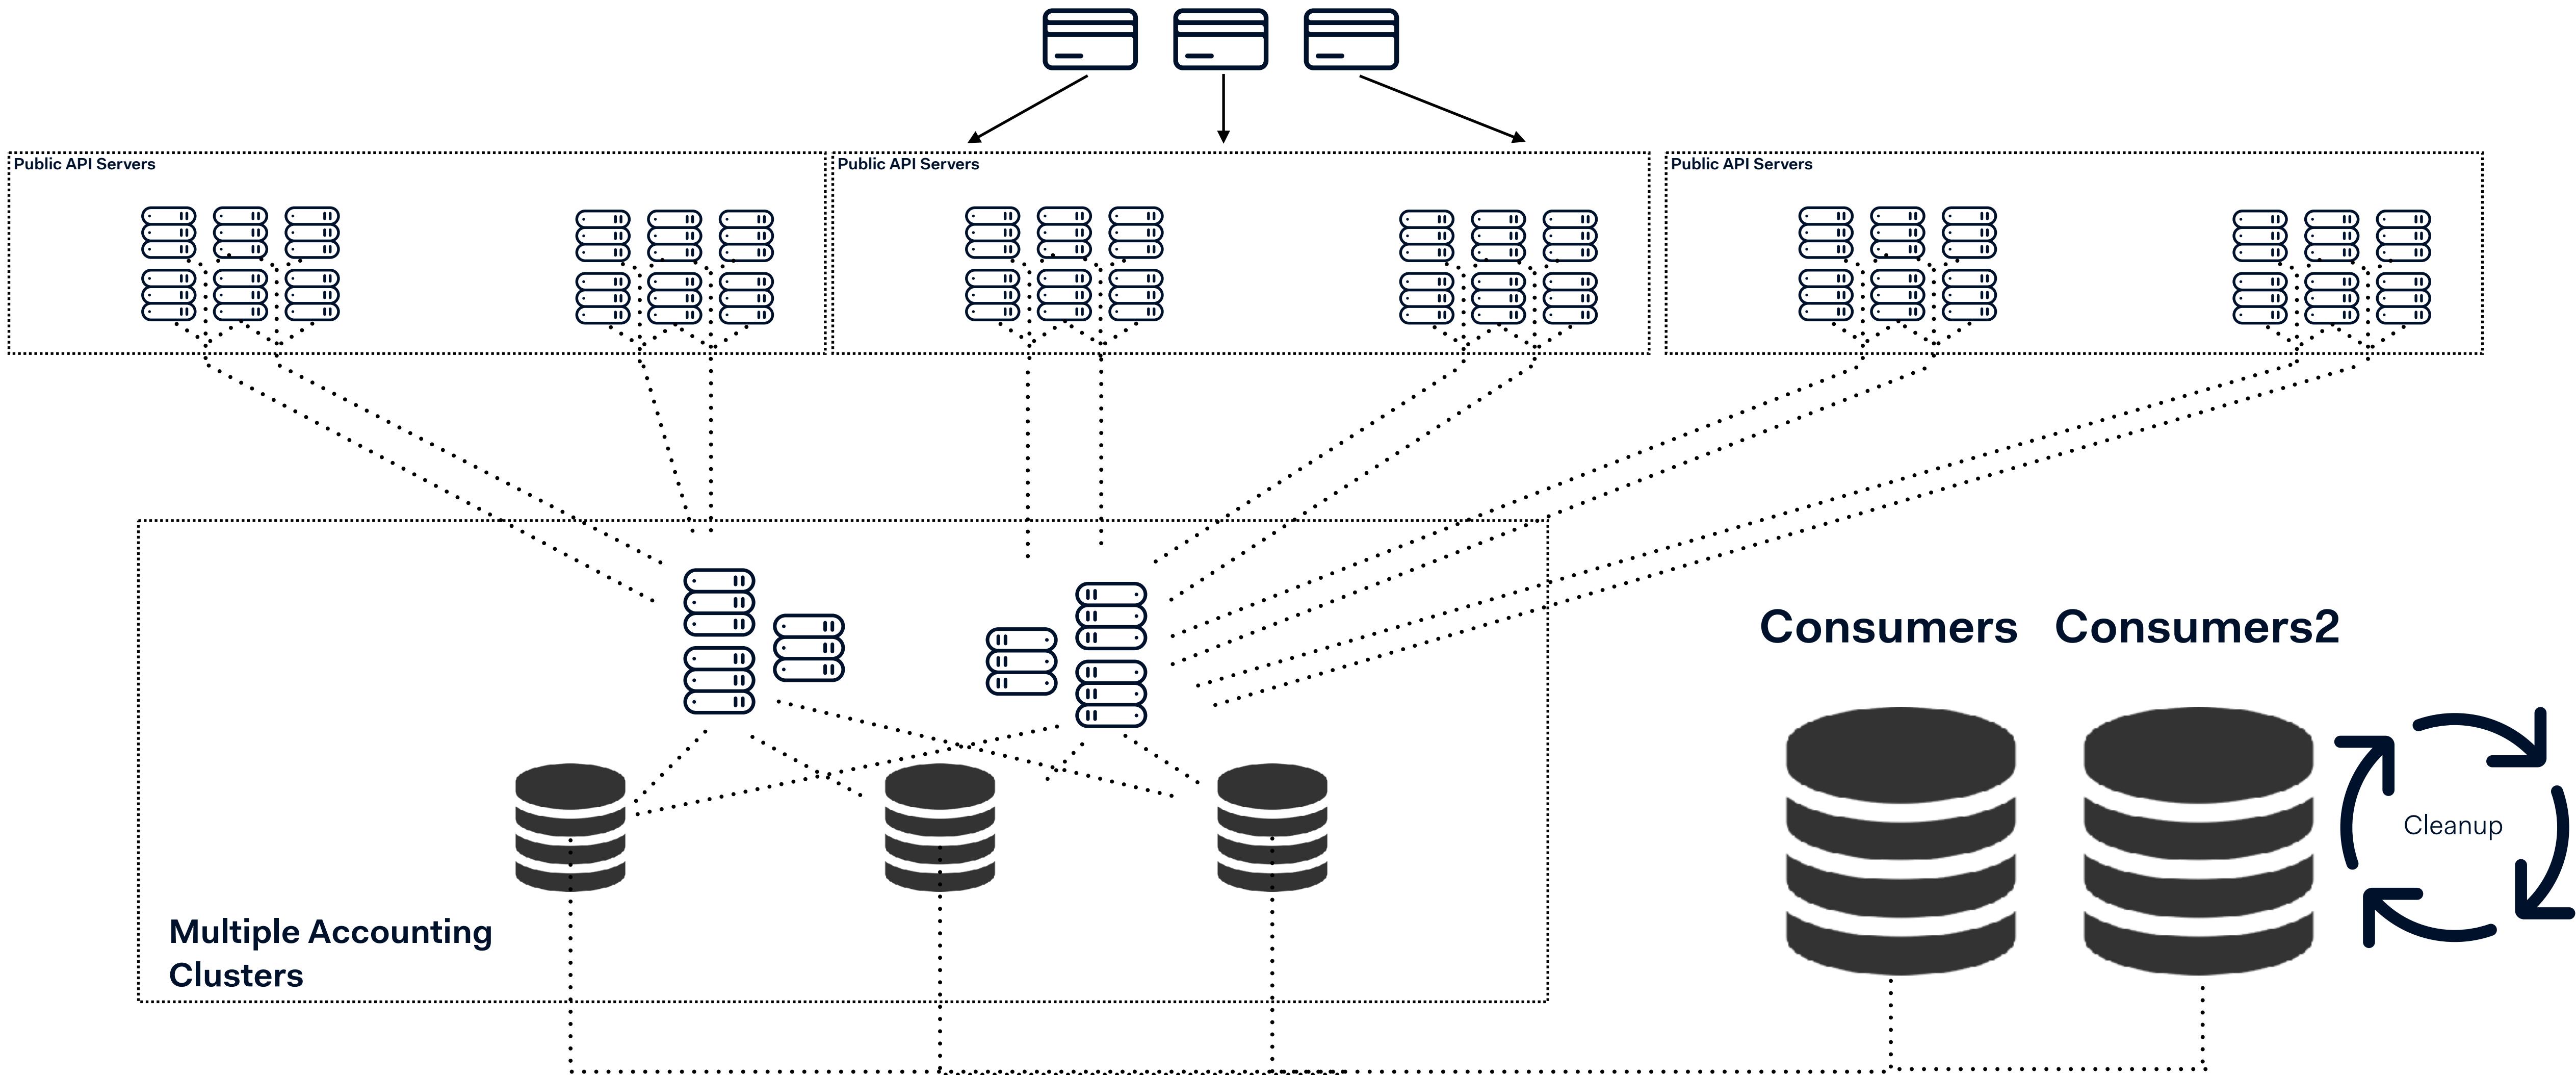

Deletion is a very heavy operation on a database
that will trigger a vacuum very often

Think of partitioning, and use a truncate or drop
operation (much cleaner).

DATA RETENTION REVISITED

High Level Architecture

The new challenge

A large school of small, silvery fish swims in a dense, swirling mass against a dark blue background.

Q&A

adyen

Business. Not boundaries.

What can you do?

There are many opportunities for students to contribute!

- Part-time student
- Starter program
- Development
